Profile Summary

Developed and deployed full-stack solutions over 3 years in the industry in most JavaScript-related technologies like React.js in front-end development. Also, created back-end solutions in Node.js and Express.js that streamlined data processing workflows.

I have 3+ years of experience in contributing to software project teams using popular methods and own methods to bring up quality and productivity of the team to the next level.

Core Competencies

- | | | |
|--------------------|---------------------|--------------------------|
| • React.js, ES6 | • Advance Debugging | • JavaScript, TypeScript |
| • Node.js, Express | • AI & ML | • MySQL, MongoDB |
| • Agile, Jira | • Web Workers | • REST APIs |
| • AWS | • HTML, CSS | • Git, Docker, CI/CD |
-

Work Experience

Associate Software Engineer

Jan 2025 – Present

XGen Group, Melbourne, Australia

- Leading R&D on AI agent integration to enhance existing company products, improving product efficiency by 25% and driving innovation
- Implemented MCP tools to facilitate efficient communication and integration with large language models (LLMs), enhancing system performance and scalability
- Collaborated with the DevOps team to optimize Continuous Integration/Continuous Deployment pipelines, cutting down deployment time by 35%

Associate Software Engineer

Jun 2024 – Jan 2025

XGen Group, Melbourne, Australia

- Contributed a team of five engineers in developing financial analysis project, while achieving 100% on-time delivery for all milestones with 6 months
- Optimized frontend rendering performance, significantly reducing load times in a data-intensive application ensuring a smooth and responsive user experience

- Facilitated the migration of critical software components to a fully containerized environment using Docker, increasing development flexibility
- Integrated Redis caching to optimize data retrieval performance, reducing database load by 40% and significantly improving response times across high-traffic endpoints
- Technology Stack of this project is mostly React.js with Node.js as the backend and AWS

Software Engineer Intern

Apr 2023 – Jun 2024

XGen Group, Melbourne, Australia

- Spearheaded the integration of RESTful API services for real-time configuration management, boosting system reliability by 45%
- Engineered and deployed 3+ microservices to handle complex business logic, achieving a 99.9% uptime
- Attended live deployments and collaborated with teams to meet tight delivery schedules, accelerating release timelines by up to 25% and ensuring timely, high-quality product launches
- Created and maintained comprehensive API documentation using Swagger to ensure clarity, consistency, and high-quality standards across the development team
- Reduced server costs by 20% by implementing efficient code optimization and optimizing database queries in an ORM-powered backend

Education

BSc (Hons) Computer Science

Sep 2022 – Sep 2027

University of Westminster, London, United Kingdom

Major: Web Development | Minor: Computer Science

Certificates

Postman API Fundamentals Student Expert (Postman)

May 2023

JavaScript Intermediate (Sololearn)

Sep 2023

Creating API Documentation (LinkedIn)

May 2023

Projects

Forever – E-commerce Web Application (Personal Project)

Feb 2025

This is a comprehensive e-commerce platform developed using the MERN stack (MongoDB, Express.js, React.js, Node.js).

Financial Dashboard (Personal Project)

May 2024

This is a full-stack financial dashboard application developed using Next.js for both the frontend and backend.
